(54) Title: STAGE DEVICE FOR A VACUUM CHAMBER

(57) Abstract: The invention relates to a transfer stage for moving an object in a vacuum chamber in at least a plane of movement, comprising at least a first and a second rod each having a first and a second end, the first and second rod being connected one to the other with their first ends by means of a first hinge, the second end of the first rod being provided with a first hinged support and the second end of the second rod being provided with a second hinged support, the first and second hinged supports being roller supports and the first hinge being provided with attachment means for the object. Particularly when using this transfer stage in lithography systems fast and reliable movements are possible.

* Special categories of cited documents:

- *A* document defining the general state of the art which is not considered to be of particular relevance
- *E* earlier document but published on or after the international filing date
- *L* document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- *O* document referring to an oral disclosure, use, exhibition or other means
- *P* document published prior to the international filing date but later than the priority date claimed

- *T* later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
- *X* document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
- *Y* document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.
- *&* document member of the same patent family
